JUMAIK

ABOUT JUMAIK

Two Generations.
One Focus: Watch Straps.

JUMAIK is a family-run watch strap company based in Guangzhou. For two generations, we have focused on one category: watch straps.

The first generation built the business by making and supplying straps. The second generation is taking that experience further—from supplying products to helping customers solve strap-related problems.

Today, we do more than take orders. We listen, coordinate and make the process easier, from the first conversation to repeat orders.

OUR GOAL IS SIMPLE

When a customer has a strap problem,

we want JUMAIK to be the first call.

Eco-Friendly Watch Straps

How Sustainable Materials Are Reshaping Watch Straps

A watch may sit on the wrist, but the strap touches the skin first. It meets sweat, sunlight and daily wear—which is why the humble strap has become a material frontier.

Vegetable-tanned leather offers one convincing answer. Instead of relying on heavy chrome chemicals, it is made with natural tannins extracted from tree bark, leaves and plant roots. Over time, it absorbs natural oils, deepens in colour and develops a personal patina—a kind of eco-luxury that improves with use rather than merely resisting it. For brands that value traditional craft, it also carries a quieter appeal: a material that feels honest, ages gracefully and tells the story of the hands and habits that wear it.

Recycled textiles tell another story. Certified recycled nylon can match virgin nylon in strength and water resistance. A newer option is recycled PET oxford fabric, made from waste plastic bottles collected on beaches. It brings a durable, casual feel to outdoor, dive and smartwatch bands while giving shoreline waste a second life.

But material choice is only the beginning. The real test is longevity. A well-made strap with reinforced stitching, sealed edges and recyclable stainless-steel hardware can be treasured for years. A “green” band that quickly falls apart creates waste, whatever its origins.

The watch strap is small, but it rests against the skin every day. Sometimes sustainability begins with a strap, a stitch, a material source—and the decision to make something worth keeping.
